

Replacement of switches in large distribution boxes

Overview

Upgrading a switchboard means replacing old ceramic fuses with modern safety switches called RCDs and circuit breakers. First, the old circuit protection is removed. A new enclosure is installed to hold. The distribution box (DB box) helps safely and efficiently distribute electrical power. Today, electrical systems are essential for homes and industries. Our upgrade solutions enhance the reliability and extend the operational life of switchgear with minimum investment and downtime. Fusible panelboard and switchboard switches are designed with quick-make, quick-break mechanisms and are enclosed for installation in specific panelboard and switchboard designs. As well as purely technical factors (intensity, number of outputs, etc. To meet all specifications (practices, speed. MAX9 plastic switchboard enclosures provide extra wiring space for running your load cables on the sides and under the DIN rail. Available in flush and surface-mounted versions, 6 to 60 module wide options and different aesthetics to suit your style. Option of metal back plate or back box.
