

Round-head pigtails are FC series fiber optic connectors

Article Overview

Round-head pigtails can be pre-terminated with FC series fiber optic connectors for high-precision splicing and network integration.

What Are Fiber Optic Pigtails?

A fiber optic pigtail is a short length of fiber cable with a factory-installed connector on one end and a bare or stripped fiber on the other, designed for fusion splicing to trunk cables or inside optical distribution frames (ODFs) (The Fiber Cable, TTI Fiber) . Pigtails simplify field deployment, reduce termination errors, and ensure consistent optical performance.

FC Series Connectors

The FC (Ferrule Connector) series is a fiber optic connector with a screw-thread locking mechanism, ideal for high-vibration environments (Radiall) . FC connectors use a 2.5 mm ceramic ferrule and provide high-precision alignment, which minimizes insertion loss and maintains strong optical performance. They are commonly used in single-mode fiber networks and can be tuned to optimize insertion loss by rotating the ferrule (Radiall) .

Round-Head Pigtails with FC Connectors

When a pigtail is described as "round-head," it typically refers to the shape of the c...
