

Router displays red fiber optic signal

Article Overview

A red LOS (Loss of Signal) light on your router indicates that the fiber optic signal is missing, weak, or interrupted, preventing your router from connecting to the internet.

What the Red LOS Light Means

The LOS (Loss of Signal) indicator on a fiber router or ONT signals that the optical signal from your Internet Service Provider (ISP) is not reaching your device properly. When the light is red or blinking red, it usually points to a critical fiber connection issue, not just a Wi-Fi or speed problem .

Common Causes

- **Fiber Cable Issues:** Physical damage, sharp bends, or loose connections in the fiber optic cable can disrupt the signal .
- **Service Outage:** ISP maintenance or local network problems can temporarily cut off the fiber signal .
- **Faulty ONT or Router:** Malfunctioning hardware, including the Optical Network Terminal (ONT), can trigger a red LOS light .
- **Power Problems:** Insufficient or fluctuating power to the router or ONT may cause signal loss .
- **Line-Side Faults:** Issues at the ISP's end, such as a fiber cut or splitter problem, can prevent the signal from reaching your home .

Troubleshooting Steps

- **Check for Local Outages:** Verify if your ISP reports any service interruptions in your area via their website or social media
