

SFP Optical Module QSFP28 Maintenance

Article Overview

Proper maintenance of QSFP28 and SFP modules involves careful handling, cleaning, ESD protection, and inspection to ensure optimal performance and longevity.

Handling and ESD Protection

QSFP28 and SFP modules are sensitive to static electricity. Always wear an ESD-preventive wrist strap connected to a grounded chassis when handling these modules. Use antistatic mats or foam to place the modules on during inspection or storage. Avoid touching the metal surfaces or optical connectors directly, and handle the module by the pull tab or bail release mechanism only .

Cleaning and Dust Prevention

Optical connectors must remain clean and dust-free to prevent signal attenuation and potential damage. Keep all connectors covered with dust plugs when not in use. If connectors become dusty, clean them using fiber-optic cleaning tools before insertion. Never touch the ends of the connectors to avoid fingerprints or contamination .

Insertion and Removal

Do not remove and reinsert transceivers more often than necessary, as repeated handling can shorten their lifespan. When removing a module, ensure it has cooled to a safe temperature (typically 10-15°C above ambient) to avoid burns or thermal stress. Slide the module out using the pull tab without touching the metal surfaces,...
