

Short-pitch optical cable suspension

Article Overview

Short-pitch optical cable suspension uses specialized clamps to securely support aerial fiber optic cables over short spans, ensuring stability, anti-slip performance, and protection against environmental stress.

Overview

Short-pitch suspension is commonly applied to ADSS (All-Dielectric Self-Supporting) cables and OPGW (Optical Ground Wire) in aerial installations where poles or towers are closely spaced. The suspension hardware ensures that the cable remains properly aligned, avoids sagging, and minimizes mechanical stress on the fibers .

Suspension Clamps

ADSS suspension clamps are designed for short and medium spans and provide reliable support at intermediate points along the cable route. Key features include:

- Anti-slip design: Neoprene inserts or straps prevent the cable from slipping, maintaining stable positioning .
- Flexible mounting: Clamps can be attached using pole hooks, brackets, or J-hooks, allowing installation on various pole types .
- Durable materials: Galvanized steel provides mechanical strength and corrosion resistance, while UV-resistant plastics or thermoplastics protect the cable and ensure long-term performance .
- Versatility: Clamps accommodate different cable diameters and can be installed using through bolts or bands
