

Single-phase photovoltaic distribution box

Article Overview

A single-phase photovoltaic grid-connected distribution box safely connects a residential or small-scale PV system to the electrical grid while providing protection, metering, and control functions.

Function and Purpose

A single-phase PV grid-connected distribution box serves as the interface between a photovoltaic system and the utility grid, managing the flow of electricity from the PV inverter to the grid. It acts as a central point for power distribution, protection, and metering, ensuring safe and efficient operation of the PV system in residential or small commercial installations .

Key Features

- **Protection Mechanisms:** Includes overcurrent protection, grid overvoltage and undervoltage protection, input lightning protection, system isolation, and fault disconnection to safeguard both the PV system and the grid .
- **Metering and Monitoring:** Supports accurate energy metering, visual inspection via windows, and integration with online monitoring systems for real-time data on voltage, current, and system status .
- **Automatic and Manual Operation:** Can automatically disconnect when grid voltage deviates beyond safe limits and reconnect when normal, with manual override options for maintenance
