

Size of Indoor Distribution Box

Article Overview

Indoor distribution boxes typically range from 200×200×120 mm to 800×600×300 mm for wall-mounted units, with larger freestanding cabinets for industrial use.

Standard Sizes and Dimensions

Indoor distribution boxes, also known as electrical enclosures or DB boxes, come in a variety of sizes depending on the application. Wall-mounted boxes commonly range from 200×200×120 mm up to 800×600×300 mm, with intermediate sizes available to accommodate wiring, circuit breakers, and spare capacity . Freestanding industrial cabinets are larger, often 1600–2200 mm in height, 600–1800 mm in width, and 300–600 mm in depth . Typical residential breaker panels may support 12 to 42 circuits, while commercial or industrial panels may require custom or larger enclosures .

Material and Protection

Indoor distribution boxes are often made from polystyrene or metal, providing impact resistance, corrosion-free performance, and maintenance-free use . They are designed for indoor applications with protection ratings such as IP30, which safeguards against solid objects but not water ingress . Flammability standards like UL 94V-0 are common for plastic enclosures, ensuring fire safety .

Selection Considerations

When choosing a distribution box size, consider:...
