

Small Adjustment Straight Machine Distribution Box

Article Overview

A Small Adjustment Straight Machine Distribution Box is an electrical enclosure produced using adjustable roll forming and bending machines, designed for flexible, decentralized power or signal distribution.

Overview

A distribution box is an enclosure that houses electrical components for power, signal, or data distribution. These boxes are widely used in buildings, industrial plants, and smart building automation systems, providing a safe and organized way to manage electrical circuits while allowing for modular and decentralized installation.

Manufacturing Process

The production of these boxes typically involves a straight machine or roll forming line with adjustable parameters:

- **Uncoiler and Straightening:** The metal strip (cold-rolled or galvanized steel) is placed on an uncoiler and straightened to remove tension and curvature .
- **Servo Feeding and Hydraulic Punching:** The strip is fed into a hydraulic device for pre-punching holes for cables, hinges, or ventilation .
- **Roll Forming and Bending:** The strip passes through a roll forming machine and bending device, shaping it into the final box dimensions. The machine allows height...
