

Special Plastic for Fiber Optic Cable Junction Boxes

Article Overview

ABS, polycarbonate (PC), and polypropylene (PP) are the most suitable plastics for fiber optic junction boxes, with ABS and PC preferred for outdoor durability and impact resistance.

Recommended Materials

1. **ABS (Acrylonitrile Butadiene Styrene)** ABS is widely used for fiber optic junction boxes due to its high impact resistance, UV stability, and chemical resistance, making it suitable for both indoor and outdoor applications. It is lightweight, cost-effective, and can withstand temperature extremes from -40°C to $+85^{\circ}\text{C}$. ABS enclosures are often rated IP65–IP67, providing excellent protection against dust and water ingress, which is critical for outdoor fiber optic installations.

2. **Polycarbonate (PC)** Polycarbonate is a high-strength, amorphous thermoplastic with excellent heat resistance and mechanical properties. It is self-extinguishing, maintains electrical insulation even in humid conditions, and can endure wide temperature fluctuations. PC is particularly suitable for transparent covers or enclosures requiring high impact resistance, though prolonged UV exposure may cause slight yellowing over time. For outdoor use, grey pigmented PC with UV stabilizers is recommended to maintain durability.

3. **Polypropylene (PP)** PP is used in some high-strength outdoor enclosures due to its UV resistance, chemical resistance, and flexibility. It is less rigid than ABS or PC but provides excellent long-term performance in harsh environmental conditions, including direct sunlight and moisture exposure.

4. **High-Density Polyethylene (HDPE)** HDPE is another thermoplastic option for larger vaults or fiber...
