

Specifications of Mobile Power Distribution Box

Article Overview

Mobile power distribution boxes are portable units designed to safely distribute electrical power, featuring configurable amperage, voltage, sockets, circuit breakers, and robust protective housings.

Core Components and Structure

Mobile power distribution boxes typically include the following components ():

- **Shell/Housing:** Made from high-strength engineering plastics, aluminum alloys, or solid rubber, providing light weight, corrosion resistance, insulation, and impact protection. Some designs include heat dissipation fins or vents to maintain stable internal temperatures.
- **Circuit Breakers:** Act as protective gates, automatically disconnecting circuits during overloads or short circuits. They may include electromagnetic or thermal release mechanisms and can be reset manually after a fault.
- **Sockets/Outlets:** Provide interfaces for power output, available in multiple types such as three-hole, five-hole, NEMA, or CEE connectors. Copper contacts are treated for high conductivity and durability.
- **Terminals, Fuses, and Leakage Protectors:** Ensure safe operation by preventing overcurrent, short circuits, and leakage currents.
