

Specifications of switch boxes in distribution boxes

Article Overview

Distribution boxes (DB boxes) are low-voltage enclosures designed to safely distribute electrical power to multiple circuits, incorporating protective devices, busbars, and safety features.

Key Components

A typical distribution box includes the following components for safe and efficient operation:

- Circuit Breakers (MCBs, RCBOs, Fuses): Protect circuits from overloads and short circuits by automatically disconnecting faulty circuits .
- Residual Current Circuit Breakers (RCCBs): Detect imbalances between live and neutral conductors to prevent electric shocks .
- Isolators: Manually operated switches to safely disconnect circuits for maintenance .
- Busbars: Metal strips that distribute electricity to outgoing circuits; often shrouded for safety .
- Neutral and Earth Bars: Provide return paths and grounding for safety .
- Surge Protective Devices (SPDs): Protect against voltage spikes from lightning or faults .
- Enclosure: Made from thermoplastics (PC, ASA) or powder-coated/epoxy-coated steel, providing dust, moisture, and impact protection
