

Speed test of a 500-fiber optic router

Article Overview

To accurately test a 500 Mbps fiber optic router, use a wired Ethernet connection and a reliable speed test tool to measure download, upload, and latency.

Recommended Testing Tools

You can use several online tools to measure your fiber connection speed:

- Speedtest by Ookla: Offers a widely used, accurate test for download, upload, and ping .
- FIREPROBE: Provides detailed metrics including jitter and network quality, suitable for fiber and mobile connections .
- True Internet Speed Test: Specifically designed for fiber connections, helps identify bottlenecks like router limitations or cable quality .
- IQ Fiber Speed Test: Measures download, upload, ping, and jitter for fiber-optic networks .

How to Test Correctly

- Use a Wired Connection: Connect your computer directly to the router using a Cat6 Ethernet cable to avoid WiFi limitations. WiFi can reduce speeds to 60-85% of the plan depending on router standard (WiFi 5 vs WiFi 6), .
- Minimize Network Load: Ensure no other devices are using the network during the test to get a “dry” measurement .
- Run Multiple Tests: Perform tests at different times of day to account for ISP congestion and peak usage periods .
- Check Router Capabilities: Older routers may not support full 500 Mbps speeds ov...
