

Splicing bare fiber optic cable

Article Overview

Yes, you can splice bare fiber optic cable using either mechanical or fusion splicing methods, but it requires precision, specialized tools, and careful preparation.

What Splicing Involves

Splicing is the process of joining two optical fibers to create a continuous light path, essential for extending, repairing, or connecting fiber optic cables. Unlike connectors, which allow temporary links, splicing produces a permanent or semi-permanent connection with minimal signal loss, ensuring efficient data transmission over long distances .

Methods of Splicing

- Fusion Splicing
- Uses an electric arc or heat to melt and fuse the ends of two fibers together.
- Produces the lowest signal loss (typically
