

Standard Dimensions of Various Series of Distribution Boxes

Article Overview

Distribution boxes vary by application: electrical DB boxes typically range from 200×200×120 mm to 2200×1800×600 mm, while septic distribution boxes commonly measure 24–36 inches wide, 24–48 inches long, and about 24 inches high.

Electrical Distribution Boxes

Electrical distribution boxes (DBs) are used to house circuit breakers, fuses, and wiring connections. Standard dimensions depend on type and application:

- Wall-mounted enclosures: Typically range from 200×200×120 mm up to 800×600×300 mm, suitable for residential or small commercial installations .
- Freestanding or floor-standing cabinets: Commonly range from 1600–2200 mm in height, 600–1800 mm in width, and 300–600 mm in depth, used for larger commercial or industrial setups .
- Material and design considerations: DBs can be made of steel, plastic, or fiberglass, with IP ratings (e.g., IP44, IP67) for water and dust protection. Wall-mounted units are lighter and easier to install, while freestanding cabinets provide higher capacity and future expansion options .
- Capacity factors: The size is influenced by the number of circuits, amperage rating, and space for cable entry, bend radius, and spare capacity for future upgrades, such as EV chargers .
