

Standards for Computer Room Power Distribution Boxes

Overview

Here are some key standards and guidelines typically followed in the design of PDUs: UL 60950-1: Standard for Safety of Information Technology Equipment, including Electrical Business Equipment. UL 62368-1: Standard for Audio/Video, Information and Communication Technology. Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy. This section concentrates upon commonly used power distribution equipment: Panelboards, Switchboards, Low-Voltage Motor Control. the white paper and for his leadership of the ASHRAE TC9. Special thanks also to Dave Kelley (Emerson), Paul Artman (Lenovo), John Groenewold (Chase), William Brodsky (IBM), Roger Schmidt (IBM), Terry Rodgers (Primary Integration Solutions), Tom Davidson (DLB Associates), Jason. Voltage standards are usually stated using two values such as the IEC standard 400/230V1 or the North American voltage 415/240V for high-efficiency green data centers². However, IT professionals still have difficulty understanding what this means. What is the relationship between these two values?

Section 90. 3 explains in specific detail how the National Electrical Code should be applied to installations and systems.
