

Switch Stacking 10 Gigabit Optical Ports

Article Overview

Stackable 10 Gigabit optical switches allow multiple units to operate as a single managed entity, providing high-speed connectivity, scalability, and redundancy for enterprise and data center networks.

Overview of Stackable 10GbE Switches

Stackable 10 Gigabit switches are standalone units that can be combined into a stack, enabling management from a single IP address while maintaining the performance and reliability of multiple switches as one logical device . This simplifies network administration, reduces management complexity, and allows for seamless network expansion without replacing existing hardware .

Key Features

- **High-Speed Connectivity:** Support for 10G fiber (SFP+) and sometimes 10G copper ports, with uplinks up to 25G or 100G depending on the model .
- **Stacking Capacity:** Many switches allow up to 8–9 units per stack, providing hundreds of 10GbE ports in a single logical network .
- **Redundancy and Resilience:** Active connections can be distributed across stack members, so if one switch fails, traffic continues through remaining units . Optional external redundant power supplies enhance uptime .
- **Single Management Interface:** All switches in a stack can be managed via a single IP address, simplifying configuration, monitoring, and firmware updates .
- **Advanced Layer 2/3 Features:** Support for VLANs, link aggregation, Spanning Tree Protocols, ERPS, VRRP, static and dynamic routing (RIP, OSPF), and ACLs for securit...
