

Switches that connect to fiber optic cables

Article Overview

Fiber optic switches are specialized network switches that use light signals to transmit data over fiber optic cables, offering high-speed, long-distance, and reliable connectivity.

Overview

Fiber optic network switches are hardware devices designed to direct network traffic through fiber optic cables instead of traditional copper Ethernet cables. They use light pulses to transmit data, which allows for higher bandwidth, lower latency, and longer transmission distances compared to electrical signals used in copper networks . These switches are essential in data centers, telecom networks, industrial automation, IoT, and 5G infrastructure .

Types of Fiber Optic Switches

- Managed Fiber Switches
 - Offer advanced features such as VLAN support, traffic management, network monitoring, and security controls.
 - Ideal for large-scale networks where performance, control, and security are critical .
- Unmanaged Fiber Switches
 - Plug-and-play devices requiring no configuration.
 - Suitable for smaller networks or simple setups
