

The Beginning of the Optical Cable Line

Article Overview

The optical cable line began with 19th-century experiments in guiding light, culminating in the first practical low-loss optical fibers in 1970.

Early Scientific Foundations

The journey of optical cables started with the study of light and optics. In the 17th century, Isaac Newton explored the nature of light and color, establishing principles of refraction and dispersion that would later underpin fiber optics technology . In the 19th century, James Clerk Maxwell formulated equations describing electromagnetic waves, providing a theoretical framework for understanding light propagation .

Experiments in Light Guidance

The concept of guiding light through a medium emerged in the 19th century. Daniel Colladon and Jacques Babinet demonstrated in 1841 that light could travel through a stream of water via internal reflection, showing that light could be confined within a medium . Later, John Tyndall popularized this principle by demonstrating light bending along curved water streams, laying the groundwork for optical waveguides [6].

Early 20th-Century Explorations

In the early 20th century, researchers began experimenting with glass fibers for light transmission. These fibers were initially used for medical imaging and inspection tools, such as gastroscopes, but their potential for communication was still theoreti...
