

The distribution box does not trip when the power is off

Overview

The most common causes include a tripped GFCI outlet, loose wiring connections, or a faulty outlet that's interrupting power downstream. GFCI outlets are much more sensitive than regular breakers and can cut power without tripping the main breaker. When the lights go out, the first reaction is to check the electrical panel for a tripped circuit breaker. These include having a faulty circuit breaker or breaker box, faulty wiring in the system, or a tripped GFCI outlet. We'll explore the possible reasons behind. But what happens when everything appears to be in order, and yet, part of your house is without power and the breaker hasn't tripped?

It's an unusual but not entirely uncommon scenario. Here's how to approach this issue, ensuring the safety of your home while pinpointing the underlying cause.
