

The electrical distribution box in the production workshop should be installed

Overview

The distribution box should be installed in an area close to the power supply to reduce power loss and ensure safety. Avoid installing in a humid and corrosive environment to prevent equipment damage. Select a well-ventilated and dry place to avoid poor heat dissipation causing. In workplaces and offices with low electric shock risk, open-type distribution panels may be installed. In. Distribution boxes shall be made of non-combustible materials; open distribution boards may be installed in production places and offices with low electric shock risk; enclosed cabinets shall be installed in processing workshops, foundries, forging, heat treatment, boiler rooms, woodworking houses. The installation of electrical systems during the construction of pre-engineered warehouses and factories plays a vital role in overall project quality, especially when integrated with shed fabrication processes to ensure safety, accuracy, and effective long-term operations. The following article. NFPA 70E, Standard for Electrical Safety in the Workplace, provides guidance in determining the severity of potential exposure, planning safe work practices including establishing an electrically safe work condition, arc flash labeling, and selecting personal protective equipment.
