

The thinnest 4-core single-mode armored optical cable

Article Overview

The thinnest 4-core single-mode armored optical cable is a Micro Armor Fiber cable with a stainless steel coil, offering extreme flexibility, crush resistance, and an outer diameter significantly smaller than conventional armored cables.

Key Features

Micro Armor Fiber Technology: TiniFiber's Micro Armor Fiber cables use a stainless steel coil instead of traditional interlocking aluminum armor, making the cable 65% smaller in diameter and 75% lighter than conventional armored cables while maintaining crush and rodent resistance (TiniFiber) . **Outer Diameter:** These ultra-thin 4-core single-mode cables typically have an outer diameter around 3–4 mm, depending on the jacket type and environmental rating, which is significantly smaller than standard armored cables that can exceed 5 mm (Lanshack, Amazon) . **Durability and Flexibility:** The stainless steel coil provides crush-proof protection, high bend radius tolerance, and flexibility for indoor/outdoor installations, including direct burial, conduit, or industrial environments (TiniFiber, Lanshack) . **Jacket and Environmental Ratings:** Many of these cables feature plenum-rated jackets for indoor use, UV-resistant outer jackets for outdoor exposure, and water-blocking aramid yarn strength members for added protection (Lanshack) . **Installation Advantages:** The small diameter and lightweight design make pulling and installation faster and easier, especially in multi-floor deployments, headend terminations, or intra-building backbones (Lanshack, TiniFiber) . **Performance:** These cables support high-speed single-mode transmission, suitable for backbone networks, industrial applications, a...
