

Three-hole distribution box

Article Overview

A three-hole distribution box is a septic system component that evenly distributes effluent from a septic tank to up to three leach field lines.

Overview

A three-hole distribution box (or 3-outlet D-box) is designed to manage the flow of wastewater from a septic tank to a home's leach field. It typically has one inlet for effluent from the septic tank and three outlet ports that connect to drain pipes leading to the leach field. This configuration is ideal for small leach fields or residential systems requiring up to three distribution lines.

Materials and Design

Distribution boxes are commonly made from concrete or durable plastic. Concrete boxes are heavy and long-lasting, while plastic models, such as those from Tuf-Tite, offer lightweight, leak-proof construction and easier installation. Each outlet is fitted with pipe seals (e.g., Polylok Poly I Seals) to prevent groundwater intrusion and maintain a watertight system.

Installation Considerations

- Sealing unused holes: Any unused ports should be sealed with plugs to prevent leaks or infiltration.
- Leveling: The box should be installed on a level base to ensure even distribution of effluent to all outlets....
