

Tools and Auxiliary Tools for Aerial Optical Cables

Article Overview

Aerial optical cable installation requires a combination of primary tools for cable handling and auxiliary tools for securing, testing, and protecting the network.

Primary Installation Tools

Cable Lashers: Essential for securing aerial fiber optic cables to supporting strands, cable lashers wrap stainless steel wire around the cable and strand to ensure stability and weather resistance. Models vary by cable diameter and application, including single or double lashing, parallel-pull capability, and high-capacity lashers for large-scale installations . **Fiber Pullers:** Used when blowing fiber is not feasible, fiber pullers provide controlled tension to pull cables through conduits or along aerial routes without damaging the fiber . **Reel Trailers:** Heavy-duty trailers transport and deploy large cable spools efficiently across long distances and rough terrain, supporting large-scale aerial projects . **Fusion and Mechanical Splicers:** Fusion splicers, such as the Fujikura FSM-100P+, achieve low splice losses (
