

Trough-type cable trays for automatic control cables

Article Overview

Trough-type cable trays provide secure, organized, and interference-protected pathways for automatic control cables in industrial and commercial installations.

Overview

Trough-type cable trays are designed with a continuous bottom surface and raised sides, forming a protective channel that secures cables while allowing easy access for maintenance and modifications. They are particularly suitable for automatic control cables, communication lines, and sensitive instrumentation wiring, as they help shield against electromagnetic interference and protect cables from mechanical damage and environmental hazards.

Key Features

- **Mechanical Protection:** The solid bottom prevents sagging and physical damage to delicate control cables.
- **Interference Shielding:** Trough trays reduce electromagnetic interference, which is critical for control and data cables.
- **Corrosion Resistance:** Available in materials like stainless steel, pre-galvanized steel, and aluminum, these trays withstand harsh industrial environments.
- **Modular Design:** Sections can be easily joined, expanded, or reconfigured, allowing future system upgrades without major infrastructure changes.
- **Ventilation:** Some designs include perforations or ventilation features to prevent h...
