

View PoE Switch Configuration

Overview

Switch(config)# interface gi1 Switch(config-if)# power inline auto time-range workhour Use the following command to verify your configuration. Power (Admin) Device (mW)PoE: Power over Ethernet (PoE) is a technology that allows Ethernet cables to carry electrical power, along with data, to powered devices. Provides details about the switch models supported by PoE. auto—Turns on the device discovery protocol and applies power to the device. NAME—Specify the name of time-range settings. When the time range is not in effect the power is. PoE supports a full set of configuration and monitoring commands that allows you to configure, manage, and display PoE settings at the system, slot, and port level. To configure inline power, or PoE, you must accomplish the following. On most Cisco Catalyst PoE switches, PoE is already enabled by default on PoE-capable ports.
