

Wavelength of Huijue Optical Module

Overview

Engineered with precision, this QSFP28 module operates at a wavelength of 1311nm, supports a 50G data rate, and facilitates two-fiber bidirectional communication over distances of up to 80km. The center wavelength is the wavelength measured at the midpoint of a half-amplitude line in the transmit spectrum. Lasers of different types or two lasers of the same type may have different center wavelengths due to factors such as techniques and production processes. Even the same laser may have. 50G QSFP28 ZR2 LWDM optical module is designed for use in 50G Ethernet links reach up to 80km over single-mode fiber via a Duplex LC connector - AscentOptics. The Transmitter Optical Sub Assembly (TOSA) is responsible for the emission of light. Its primary function entails converting electrical signals into optical signals. This assembly comprises a light source, such as a laser diode or a semiconductor light-emitting diode (LED), an optical interface, a. The dimensions of a CFP optical module are 144. A QSFP28 interface can use a 100GE QSFP28 optical. As an industry-leading ICT infrastructure and industry solution provider, Ruijie offers customers a wide variety of high-density and low-power 10G optical modules.
