

What are the specifications for outdoor optical distribution boxes

Article Overview

Outdoor optical distribution boxes provide secure, weatherproof fiber management for FTTH/FTTx networks, with capacities ranging from 4 to 96 fibers and IP-rated protection for harsh environments.

Key Features

Port Capacity and Fiber Termination

- Low-density boxes typically support 4 to 8 fiber connections, suitable for small-scale FTTH deployments or last-mile access networks .
- Medium to high-density boxes can accommodate 24 to 48 fibers, with options for SC simplex or LC duplex adapters, and space for PLC splitters .
- Very high-density models support up to 96 fibers, fusion splices, and multiple PLC splitters for large-scale FTTx networks .
- Outdoor boxes are designed with IP-rated enclosures to resist dust and water. Common ratings include IP55 for moderate protection and IP67 for full waterproofing, allowing temporary submersion .
- Materials are typically durable plastics or composites to withstand UV exposure, temperature variations, and harsh weather conditions.
- Wall-mounted, pole-mounted, or handhole/underground installation options are available .
- Compact designs allow integration in urban and rural environments, with secure tamper-resistant screws to prevent unauthorized access .
