

What is FZL distribution box

Article Overview

An FZL distribution box is a flush-mounted enclosure that houses an EWFS FZL receiver for controlling 230 V sun shading drives.

Overview

The FZL distribution box is part of the WAREMA EWFS (Electro-Mechanical Wireless Field System) for building automation, specifically designed to control sun shading systems such as blinds or awnings. The box contains the FZL receiver, which receives commands from EWFS-compatible transmitters or sensors and directly actuates 230 V AC sun shading drives .

Key Features

- Flush-mounted design: The box is installed in a wall or junction box, making it unobtrusive and protecting the receiver from external damage .
- Direct control: The FZL receiver can directly operate sun shading drives without requiring a central control system, though it can also integrate with one .
- Floating switching contacts: This allows flexible wiring and compatibility with various electrical systems .
- Power supply options: The receiver can be powered via a 24 V DC line, floor distribution control, or a dedicated power supply unit .
- Compact and safe: The enclosure ensures safe installation and operation, keeping the electronics protected and organized.
