

What is a mesh cable tray called

Article Overview

A mesh cable tray is commonly called a wire mesh cable tray or basket cable tray.

Definition and Structure

A wire mesh cable tray, also known as a basket cable tray, is constructed from welded steel wires forming an open, grid-like structure . This design allows for excellent ventilation, reducing heat buildup around cables, and provides easy access for installation, maintenance, or reconfiguration . The open mesh structure makes it lightweight and flexible, ideal for environments where cable layouts may frequently change, such as data centers, telecommunications facilities, and commercial buildings .

Materials and Variants

Wire mesh cable trays are typically made from steel, galvanized steel, aluminum, or high-density plastic, depending on environmental conditions and load requirements . They come in various sizes and configurations to accommodate different cable volumes and installation needs. The open design also facilitates routing of low-voltage, telecommunication, and fiber optic cables .

Applications and Advantages

- Applications: Data centers, IT and telecom networks, office buildings, industrial facilities, and healthcare environments .
- Advantages: Lightweight, easy to install and modify on-site, excellent airflow for c...
