

What is a suitable speed in megabits per second for mobile fiber optic internet

Overview

The good news is that for most people, any fiber internet speed plan—up to 500 Mbps or 940 Mbps—will provide enough bandwidth. Typically, the choice comes down to how many devices you plan to have connected at the same time. Bit is the basic digital data unit. It has only two possible values: 1 and 0. As internet is capable of transferring multiple hundreds and thousands of bits in a. Compare typical online activities with the minimum download speed (Megabits per second, or Mbps) needed for adequate performance for each application. Additional speed may enhance performance. For household broadband needs, use our Household. Internet speed refers to how quickly data is transmitted between the internet and your device, measured in megabits per second (Mbps).
