# What is also known as a fiber optic splice package

## Article Overview

A fiber optic splice package is also known as a fiber splice closure or fiber optic splicing box.

A fiber optic splice package serves as a protective enclosure for fiber optic splices, ensuring that the delicate connections between fibers are safeguarded from environmental hazards such as moisture, dust, and mechanical stress, while maintaining signal integrity and low attenuation . It is used to join two fiber optic cables permanently, either through fusion splicing or mechanical splicing, creating a continuous light path for data transmission .

Key Features and Functions

• Protection: Shields spliced fibers from environmental and mechanical damage, ensuring stable network performance .
• Organization: Provides trays or compartments to manage and organize fibers, simplifying maintenance and future upgrades .
• Durability: Designed to withstand harsh conditions, including outdoor installations, underground setups, or aerial deployments .
• Low Signal Loss: Fusion splices within the closure typically have minimal attenuation (e.g., 0.05 dB), preserving high-quality signal transmission .
