

What is the model number of the fiber optic terminal box

Article Overview

FTB-SC8-WOPA is a commonly referenced model number for a fiber optic terminal box.

The FTB-SC8-WOPA fiber optic terminal box is designed for FTTx applications, supporting at least 8 users and providing space for splicing, splitting, storage, and management of optical fibers (FS) . It features a lightweight design, a snap-clip closure system for easy access, and a mechanically sealed body with good waterproof performance, making it suitable for both indoor and outdoor installations . Other manufacturers, such as OTRANS, offer series like TBA and TBS for wall-mounted fiber optic terminal boxes, which are compatible with PLC splitters (1:4, 1:8) and provide IP55 or IP65 protection levels for dust and water resistance . These boxes are made from high-quality ABS+PC plastic, ensuring durability and UV resistance for long-term outdoor use . Fiber optic terminal boxes generally serve to terminate, splice, and distribute optical fibers, and they come in various types including straight-type and branched-type, with port capacities ranging from 2 to 24 ports. They can be wall-mounted, pole-mounted, or desktop types, and are available in both plastic and metal shells . When selecting a fiber optic terminal box, the model number like FTB-SC8-WOPA or series designation such as TBA/TBS is crucial for ensuring compatibility with your network requirements, including the number of users, splitter integration, and environmental protection needs .
