

What is the purpose of an EOC terminal box

Article Overview

An EOC (Ethernet over Coax) terminal box is used to transmit Ethernet data over existing coaxial cable networks, enabling broadband internet, IPTV, and network connectivity without installing new Ethernet cabling.

Function and Operation

An EOC terminal box converts standard Ethernet signals into a format suitable for transmission over coaxial cables and then reconverts them back to Ethernet at the receiving end, allowing devices to communicate over the existing coaxial infrastructure . It typically connects to local network devices via RJ45 Ethernet ports and to the coaxial network through a coaxial connector . This enables seamless integration with set-top boxes, computers, IP phones, and other networked devices .

Applications

- **Broadband Internet Access:** Provides high-speed internet over coaxial cables, reducing the need for new cabling .
- **IPTV and Video on Demand (VOD):** Supports digital TV services by transmitting video and audio data alongside internet traffic .
- **Home and Enterprise Networking:** Can be installed in homes or offices to extend network connectivity using existing coaxial infrastructure .
- **Wireless Extension:** Some EOC terminals include Wi-Fi functionality, allowing wireless devices to access the network through the terminal
