

What size electrical distribution box is suitable for installation in a factory

Article Overview

For a factory, electrical distribution boxes typically range from medium wall-mounted enclosures (600×400×200 mm) to large floor-standing cabinets (1600–2200 mm height, 600–1800 mm width, 300–600 mm depth), depending on load, wiring, and future expansion needs.

Key Considerations for Factory Installations

1. Internal Component Space The enclosure must accommodate all electrical components such as circuit breakers, PLCs, relays, contactors, and bus bars. Internal usable space is smaller than external dimensions due to wall thickness, mounting plates, and brackets, so always design based on the back-panel or mounting plate size rather than overall external dimensions . 2. Wiring and Heat Clearance Allow 20–30% extra space for wiring, cable bend radius, and heat dissipation. Overcrowding can lead to overheating and maintenance difficulties . 3. Standard Size Ranges

- Wall-mounted enclosures: 300×300×150 mm, 400×300×200 mm, 600×400×200 mm. Suitable for medium loads or control panels with moderate wiring .
 - Floor-standing cabinets: 1600–2200 mm height, 600–1800 mm width, 300–600 mm depth. Ideal for large distribution panels, multiple circuits, or complex automation systems .
 - Industrial junction boxes: Sizes vary based on wire fill and device requirements; larger boxes are recommended for three-phase systems or high-density wiring .
4. Mounting Type...
