

What tools are used for fiber optic cold connectors

Article Overview

The tool for fiber optic cold connectors is typically a fiber optic cold connector kit, which includes a cleaver, fiber stripper, visual fault locator, and other installation tools.

Overview

Fiber optic cold connectors, also called fast connectors, allow quick mechanical splicing of fibers without epoxy or polishing. To install these connectors, a specialized tool kit is used to prepare the fiber, cleave it precisely, and ensure proper alignment within the connector. These kits are designed for both single-mode and multimode fibers and can handle various cable diameters.

Common Tools Included in Cold Connector Kits

- Fiber Stripper – Removes the protective coating from the fiber without damaging the glass.
- Fiber Cleaver – Cuts the fiber cleanly to create a smooth end-face for the mechanical splice. High-end cleavers, like the CT50, offer automatic blade rotation and long blade life.
- Visual Fault Locator (VFL) – Checks for breaks or misalignments in the fiber by emitting visible light.
- Optical Power Meter (OPM) – Measures light transmission to verify connection quality.
- Connector Alignment Tools – Ensure precise positioning of the fiber within the col...
