

What type of junction box is suitable for fiber optic cable TV

Article Overview

Fiber optic splice closures or junction boxes designed for CATV networks provide secure splicing, branching, and protection for optical fibers in both indoor and outdoor environments.

Types of Fiber Optic Junction Boxes

1. **Fiber Optic Splice Closures (FOC/Splice Boxes)** These are high-protection enclosures used for splicing and branching fiber optic cables. They are suitable for outdoor and underground installations, including direct burial, overhead, or pole-mounted setups. Splice closures can be horizontal (in-line) or vertical (dome-shaped), providing multiple entry and exit ports for connecting several fiber cables. They ensure low-loss, high-performance connections and protect fibers from environmental hazards such as moisture, dust, and mechanical stress, making them ideal for CATV networks .

2. **Fiber Distribution Boxes (FDBs)** FDBs are passive enclosures used for organizing incoming and outgoing fibers, providing secure splicing, termination, and distribution. They are commonly used in FTTH and PON deployments but are also suitable for CATV applications. FDBs typically include splice trays, adapters, and cable routing components to maintain optical performance and simplify maintenance. They are available in capacities ranging from 8 to 96 fiber ports or more, with recommended headroom for future expansion
