

What type of wires are used to fix the distribution box

Article Overview

Distribution boxes typically use insulated copper wires with specific gauges and color codes according to circuit type and load requirements.

Wire Types and Specifications

- **Material:** Copper wires are standard due to their excellent conductivity and durability. Aluminum wires are less common and usually reserved for high-capacity industrial circuits .
- **Insulation:** Wires must be properly insulated to prevent short circuits and electrical hazards. PVC or XLPE insulation is commonly used for indoor and outdoor applications .
- **Gauge/Size:** Wire size depends on the circuit load:
 - Lighting and socket circuits: 2.5 mm² copper wire
 - Air conditioning or heavy appliances: 2.5 mm² to 4.0 mm² copper wire
 - Main incoming supply: Larger gauge wires, typically 6 mm² or higher, depending on total load .

Color Coding

- **Phase (Live) wires:** Yellow (A phase), Green (B phase), Red (C phase)
- **Neutral wire:** Blue
- **Protective Earth (PE):** Green/Yellow striped Following these color codes ensures safety and compliance with electrical standards
