

What types of power supplies come with cable management racks

Article Overview

Cable management racks typically use rack-mounted Power Distribution Units (PDUs), which come in basic, metered, monitored, and smart types to efficiently distribute and manage power.

Overview of Rack Power Supplies

Cable management racks in data centers or server rooms rely on rack-mounted PDUs to deliver stable power to servers, switches, and storage devices while maintaining organized cabling and airflow efficiency. These PDUs are designed to integrate with structured racks, allowing technicians to manage multiple power connections without disrupting equipment.

Types of Rack PDUs

- Basic Rack PDUs
 - Provide fundamental power distribution to IT equipment.
 - Cost-effective and reliable for small server rooms or racks near IT staff.
 - Do not include monitoring or remote access features.
- Metered Rack PDUs
 - Include a hot-swappable current meter for real-time monitoring of voltage, current, and power factor.
 - Help detect overloads and optimize power usage.
 - Ideal for cabinets where monitoring of power load is important
