

Which company gives the yellow light on broadband pigtails

Article Overview

A yellow light on broadband pigtails or ONT devices is commonly used by Verizon, EE, and other ISPs to indicate connection issues or that the device is attempting to establish a broadband link.

Company-Specific Usage

- **Verizon:** A yellow light on a Verizon router or ONT indicates that the device is powered on but cannot communicate properly with Verizon's network, meaning the internet connection is not established .
- **EE (UK):** On EE Smart Hubs, a flashing yellow light signals that the router is connecting to broadband. It usually turns aqua once the connection is successfully established .
- **General ONT Devices:** Many Optical Network Terminators (ONTs) use amber or yellow LEDs to show that the device is attempting to establish a connection or has a weak signal. This applies to various ISPs and fiber providers .

What the Yellow Light Means

- **Attempting Connection:** The device is trying to establish a link with the ISP network.
- **Limited Connectivity:** The broadband signal may be weak or intermittent.
- **Troubleshooting Steps:**
 - Ensure all cables are securely connected to the ONT and router .
 - Restart the router and ONT to reset the connection
