

Which type of micro-module data center is best

Overview

For workloads under 100 kW that need to live inside an existing building, the right answer is usually a micro-module. The container is the right answer when the site is remote, harsh, temporary, or so constrained that civil works aren't realistic. Micro-module data centers have achieved stepped technological evolution through an innovative "prefabricated, intelligent, and product-oriented" architecture. In the early stage, they mainly adopted closed cold aisle combined with air cooling. The category spans 30 kW micro-modules tucked inside an enterprise floorplate, containerized 500 kW edge units. Micro data centers offer a compact, cost-effective alternative to traditional facilities, bringing critical compute and storage closer to where it's needed.
