

Why don't optical module companies manufacture components

Overview

Here is the industry secret that big brands don't want you to know: They don't make their own modules. is a global leader in semiconductors, particularly in networking, storage, and wireless communication solutions. While the company is best known for switching chips, PHYs, and networking SoCs, it also plays a significant role in the optical communication industry, particularly in. Vertical Integration: Leading firms are expanding into upstream components like chips and substrates to control quality and costs. As a direct manufacturer (Wolon), we are here to pull back the curtain on the optical. The rapid development of AIGC has promoted the demand for 800G optical modules, and the entire industrial chain involving optical components, optical modules, and optical communication equipment is expected to fully benefit. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa.
