

Wiring details in the distribution box

Article Overview

A distribution box safely distributes incoming power to multiple circuits using MCBs, RCCBs, neutral and earth links, with proper wiring and protective devices.

Components of a Distribution Box

A typical distribution box includes:

- **Main MCB (Double Pole):** Acts as the main switch, handling the full incoming load (commonly 63A for domestic setups) and connecting the phase and neutral from the main supply .
- **Single-Pole MCBs:** Protect individual output circuits for lighting, outlets, or appliances .
- **RCCB (Residual Current Circuit Breaker):** Provides protection against leakage currents, electrical shocks, and insulation faults, usually rated at 30mA for domestic use .
- **Neutral Link:** Distributes neutral to all output circuits .
- **Earth Link:** Connects the supply and load earthing for safety .
- **Busbars and Terminal Blocks:** Facilitate organized connections and secure wiring .

Wiring Procedure

- **Power Off:** Ensure the main supply is completely turned off before starting any wiring .
- **Mounting:** Secure the distribution box at an accessible height (typically ~1.5m) in a dry, ventilated area .
- **Main Connection:** Connect the incoming live (phase) and neutral wires to the inpu...
