

Wiring of Mobile Base Station Power Distribution Box

Article Overview

A mobile base station power distribution box distributes AC mains to protective devices, converts power to DC, and supplies both operational and backup systems with proper wiring and safety measures.

Overview of Power Distribution in Base Stations

The power distribution box in a mobile base station acts as the central hub for electrical energy, ensuring that all critical components—such as the Baseband Unit (BBU), Remote Radio Unit (RRU), Active Antenna Unit (AAU), and auxiliary systems—receive stable power . It typically handles:

- AC mains input from the utility or generator
- Surge protection and circuit breakers
- DC conversion via switch-mode power supplies
- Battery backup integration for uninterrupted operation during outages

Typical Wiring Components

- Main AC Input
- The incoming three-phase or single-phase AC supply is connected to the main circuit breaker or double-pole MCB.
- This breaker protects the system from overloads and short circuits .
- Protective Devices...
