

Zimbabwe Aluminum Alloy Cable Management Frame Specifications

Article Overview

Aluminum alloy cable management frames in Zimbabwe are typically lightweight, corrosion-resistant, and designed to comply with international standards such as ASTM, ISO, and local SAZ guidelines.

Material and Construction

Aluminum alloy frames are made from high-quality aluminum profiles, often sourced from reputable suppliers in Southern Africa, ensuring durability and minimal maintenance. The frames are lightweight, non-corrosive, and suitable for indoor and outdoor installations, making them ideal for cable trays, ladders, and other cable management systems. They are usually finished in standard colors or anodized coatings to enhance corrosion resistance and aesthetic appeal.

Standards and Compliance

Cable management frames in Zimbabwe are expected to comply with international and local standards, including:

- ASTM A123 & ISO 1461 for galvanization and corrosion protection.
- ANSI/NFPA 70 (National Electrical Code) for electrical safety.
- NEMA VE 1-2017 for metal cable tray systems.
- Standards Association of Zimbabwe (SAZ) for national conformity and certification.
