

Zimbabwe Low-Voltage Power Distribution Box

Article Overview

Low-voltage power distribution boxes in Zimbabwe safely distribute electricity from the main supply to multiple circuits, protecting each with breakers and other safety devices.

Overview

A low-voltage distribution box (also called a distribution board, panel board, or breaker panel) is a central component in any electrical system. It receives electrical power from the main supply and divides it into subsidiary circuits, each protected by a circuit breaker or fuse. These boxes also house earth leakage units, timers, and contact breakers, ensuring safety and efficient power management in residential, commercial, and industrial settings (Sona Solar Zimbabwe) .

Key Components

- Bus bars: Conduct electricity to multiple circuits.
- Circuit breakers (MCBs): Protect individual circuits from overcurrent.
- Residual Current Devices (RCDs/RCBs): Prevent electric shocks.
- Fuses: Provide overcurrent protection.
- Enclosure: Typically made of metal or PVC, resistant to corrosion and designed for indoor or outdoor use.
- Space for wiring: Allows for neat installation of cables and additional devices....
